

## 015 - Technical Sale Sheet: Ratchets

**Materials:** Polyester

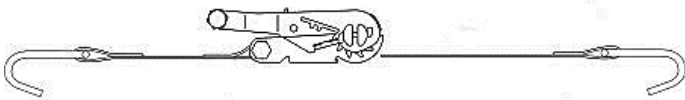

**Standards:** EN12195 - 2:2001

Ratchet straps, also known as tie down straps are used to fasten and secure equipment and cargo during transport by air, land or sea. They are normally made from durable hard wearing polyester webbing given them low stretchability to help keep the load from moving. The ratchet allows the user to ensure the straps are taut and that the items are tied down securely. Learning how to use a ratchet strap can be vital to safe cargo management.

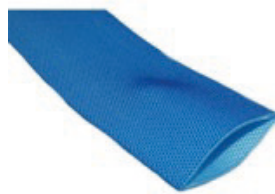

### Product Features

- Available in 25mm to 75mm wide webbing
- From 600kg b/l (300daN l/c) to 10,000kg b/l (5000daN l/c)
